Skills

- HTML | CSS | JavaScript | ReactJS | Material UI | Ant Design | Python | MongoDB | DynamoDB | SQL | Nodejs | Express | Swagger OpenAPI | Sequelize | Ubuntu | Git | Web scraping
- Azure CI/CD | Azure Kubernetes | Openstack API integration | AWS Lambda, ApiGateway | Jest | Microservices | Full stack development | English professional | Japanese Basic
- MERN stack | Django | MVC | OOP | Chrome extension development

Experience

Backend Developer **Cognni (MIP)** *Austin, USA* **2022/03 - Current**

- Built, maintained and optimized backend services on nodeJS.
- Configure logging for services using honeycomb and Bunyan (nodejs logging library).
- Devops work includes; Azure CI/CD for a nodejs service, configuring service busses interaction in Azure with the backend service, and service deployments in Azure Kubernetes environment.
- Nodejs service knowledge transfer meetings, project demonstrations, and code reviews.

Software Engineer **iVolve Technologies (Cloud Solutions)** *Karachi, Pak* **2019/11 - 2022/02**

- Designed and implemented user-facing components on ReactJS by taking requirements from the client.
- Built and maintained services and REST APIS on nodeJS and expressJS.
- Integrated keycloak to use SSO with multiple providers.
- Integrated OpenStack API's with a backend built on Django and nodeJS. Integrated Hystax Disaster Recovery API's.
- Integrated killbill (billing system) with the product as well as integrated NTOP (network traffic monitoring tool) to monitor and bill egress traffic.

Android Developer, Intern **Meezo Tech Solutions (Software House)** *Karachi, Pak* **2018/01 - 2018/04**

- Implemented designs using XML which were based on given requirements.
- Built databases and tables on SQL by following ERD diagrams.
- Building API's on PHP and developed four different android applications for different clients.
- Managed code bases on GitLab.

Education

Bachelors in Computer Science **Iqra University** *Karachi, Pak* **2014/09 - 2018/12**

- Major in Software Engineering.

Projects

- **Currency_Exchange - Django:** Currency exchange is a test project built on Django. The base currency euro was considered. See [here](#) for more details.
- **Billing microservice - NodeJS:** A microservice built on nodejs that communicates with a third-party service to orchestrate billing-related information for a user. The project can be seen [here](#).

There are more projects but they are confidential and too complex to explain here which beats the idea of keeping things simple in a resume.
